

FLEXIBLE SECURITY

AET – simplicity sells, flexibility delights

## AET – Convenient management of authentication & digital identities

The Dutch company A.E.T. Europe B.V. (AET), headquartered in Arnhem and founded in 1998, is committed to IT security. AET offers its customers ingenious solutions based on worldwide accepted standards for e-commerce and information security.

The international customer base that has opted for AET products and uses them in a great range of projects and applications is impressive.

The reasons for this success include the simplicity and flexibility of the products and services offered. From administration and integration into existing environments all the way to operation – users benefit at every stage thanks to AET's philosophy which allows for configuration of very highly complex systems and sophisticated technologies into simple processes that non-experts can relate to.

AET has been dedicated to practice-oriented research and development right from the start. It has its own state-of-the-art development centre in Arnhem in addition to a test and solution centre – facts that have proven crucial for success.

AET's extensive skills and experience regarding the integration of smart cards and USB tokens in the area of certificate-based applications ensure that the customer remains completely independent of manufacturers.

Furthermore, AET is setting new standards in the crucial business area of developing middleware for smart cards and USB tokens with its **SafeSign Identity Client** (SafeSign IC). This middleware supports all conventional interfaces and runs on Linux, MAC OS X and the Solaris platform as well as Windows. It delivers strong authentication with more than 70 cards and USB tokens from more than 10 different manufacturers. As a result, AET has top ranking as the market and technology leader when it comes to middleware for cryptographic tokens.

Another of AET's bestsellers is **BlueX Digital ID Management**. This well-known and extremely adaptable system supports the simplification and automation of individual steps for the digital ID management process. BlueX enables seamless integration into existing corporate structures and processes. In other words: the card management system interfaces, for example, with identity management or access control systems. Consequently, the customer profits from considerably shorter implementation cycles and the resulting reduction in costs.

## The benefits of AET – at a glance

- Flexibility and independency of platforms and applications
- Highly adjustable quality solutions
- Extensive know-how & practical experience
- Simple integration into system environments
- Trustworthiness & reliable support
