Vacancy

Android Developer (Senior)

location: Amsterdam / Arnhem (The Netherlands)

We are looking to fill a number of roles within our ConsentID development teams in Amsterdam / Arnhem (The Netherlands) at various levels. Are you the Android Software Senior Developer who is going to make us even stronger? We're going to revolutionise end-to-end identity solutions. Are you passionate about programming in Java? Do you like to design and implement iOS apps and participate in user interface design? We will have a challenge for you!

Your challenge as Senior Android Developer

As our **Software Developer,** your primary target will be Android. You'll be developing and implementing our existing Android Apps as well as new Apps and will collaborate with cross-functional teams to define, design and ship new features. You will participate in and drive user interface design. You will implement security updates and bug fixes on the existing apps and maintain the existing ones. You provide support during analysis of complicated customer issues and/or new customer requirements. As our **Senior Android Developer**, you will deliver all aspects of the software development lifecycle including analysis, designing, coding, (partly) testing, and troubleshooting. Help us to bring authentication and digital document signing to its next level.

Our solutions

You will be part of an experienced cross-functional team developing with and learning from some of the best developers in the industry. We're driving the next phase of the Internet now with all the 'things' that are connected. More and more business is done using services offered by 'connected devices'. AET is at the forefront of this movement, with end-to-end solutions that provide secure access, authentication and identification. Are you passionate and motivated to join our team of experienced developers? You can read more on AET Europe and the projects on our website.

Can you help us pull it all together?

We're looking for a **Senior Android Software Developer with excellent knowledge of Java** with the following profile:

- Has a Bachelor or Master degree in IT,
- Has at least 5+ years of programming experience,
- Has a good knowledge of Java,
- Has at least 2+ years of experience in Android App development
- You can communicate (fluently) in English,
- You can work alone and within a team
- You are located around **Amsterdam** or **Arnhem/Nijmegen** (or willing to relocate).
- A love of playing darts is optional but encouraged.

Having experience with developing for (mobile) platforms and devices like iOS and/or cross-platform App development isn't required but would be a nice-to-have. The same applies to REST APIs, user interface and/or graphical design, smart cards (PKCS#11), configuration management, Cryptography and/or PKI, Web services like, SOAP and XML.

Vacancy

In the context of the integrity and/or reliability of our staff we can conduct a security screening during the application process. Therefore, we seek only Senior Developers with the <u>European nationality.</u>

Are you up for the challenge?

If your passion is developing great Android apps, innovating and exploring new technologies and you enjoy being challenged and enjoy learning we'd love to hear from you! If you feel that you have the relevant skills, qualifications and experience please send your resume to recruitment@aeteurope.com. We are looking forward to getting to know you!
