FOR IMMEDIATE RELEASE

2018, the definitive year for Digital Identities

Enabling secure and universal support of secure elements for digital signing documents, transactions, and logical access.

Arnhem, 23 May 2018 – AET announces the launch of the next generation of SafeSign Identity Client version 3.5

AET Europe, the leading vendor of solutions in the area of strong digital identities, is announcing the launch of the new generation of their leading product SafeSign Identity Client, version 3.5 for Standard (Windows and Linux) and Minidriver (Windows).

With this launch, the company reinforces its position in the market as the front-runner of solutions enabling secure elements for desktop applications.

AET Europe has been producing solutions for Strong digital identities and secure-elements since 1998. With millions of customers worldwide, SafeSign IC is the only solution in the market with universal support for all tokens featuring the SS Applet; used by hundred of devices from all major hardware manufacturers.

The new release of SafeSign comes with powerful new features. It now handles an even broader range of Java Card 2.2.2 and higher tokens, offering customers unmatched freedom of token support. Moreover it supports Windows Server 2016 and offers enhanced overall stability.

This newest version for Windows and Linux as well as the official release notes are available for all customers with active Maintenance Service Agreements.
