

Release of SafeSign Identity Client version 3.7 for Windows, MacOS and Linux

Arnhem, September 22 2021 – AET announces the launch of the next generation of SafeSign Identity Client version 3.7, introducing QSCD support.

AET Europe, the leading vendor of solutions in the area of strong digital identities, is announcing the launch of the new generation of their leading product SafeSign Identity Client, version 3.7 for Standard (MacOS and Linux) and Minidriver (Windows).

With this launch, the company not only reinforces its position in the market as the front-runner of solutions enabling secure elements for desktop applications. Adding to its unique ability to support all tokens featuring the SS Applet; used by hundreds of devices from all major hardware manufacturers, it now also provides support of JCOP 4 cards enabling use as a QSCD.

This newest version for Windows, MacOS and Linux as well as the official release notes is available for all customers with active Maintenance Service Agreements.
